---	--

INTRODUCTION

The biggest worry for all parents with children diagnosed with Autism or ASD is about the “future” of their child. This concern specifically includes the nagging doubt whether their child would be able to survive independently or they would need to plan for institutional care for their child. With 1 in 68 children being diagnosed with autism, the prevalence of children on the spectrum who grow into adulthood without being able to manage even their basic needs independently is on the increase.

Added to this is the prevailing erroneous notion that there is no known effective “scientific” cure for the debilitating symptoms in autism. I present here a case of a 17 year old adolescent with autism who had been completely dependent on his parents even for completing the basic tasks of survival on a daily basis, for 17 years of his life and was healed by me operating in the newly emerging scientific discipline of Applied Intentional Epigenetics, using the cutting edge Intent Healing (TM) Remote Healing method, following which all his limiting

symptoms disappeared and he became completely independent, finding a part-time job for himself. The boy lived in Canada and I did the Remote Healing sessions from Chennai, India.

CASE

A 17 year old boy who had been diagnosed as a case of Autism at the age of 2 years and who was living in Canada along with his parents presented to me with the complaints of low energy and motivation, poor peer interaction and socialization, incessant talking to himself, addiction to smelling his blanket and inability to dress independently and travel by bus independently. In addition to this he was dependent on Melatonin for sleeping at night, had Strabismus (eyes), low Blood Pressure (B.P) in both lower limbs, poor co-ordination between left and right side of the body, had violent temper tantrums, was impatient and restless and not helping his parents with chores.

MATERIALS

Epigenetics literally means “control above genes”. Applied Intentional Epigenetics is the art and science of applying techniques that bring about epigenetic transformations in a being or system using the power of Intention in any way, shape or form. It brings about these transformations at the level of the genes and the DNA of the being by bringing about Energy Shifts within the patterns encoded in the DNA, among other things. Applied Intentional Epigenetics thus has an underlying Energy Medicine basis to it. Energy Medicine is the art and science of restoring a being/system to its natural state of well-being and wholeness by augmenting the innate ability of the being/system to heal itself on all levels by bringing about shifts in the energy fields in the being/system to resonate with its natural frequency of alignment, balance and harmony. Intent Healing(TM) is healing using the power of Intention, accessing energies prior to consciousness that is free from all limiting conditioning and which brings about the realignment in the energy fields of beings/systems by rewiring the neural network in the brain and gut, reprogramming the DNA and erasing faulty cellular memories. To understand the newly emerging scientific fields of Applied Intentional Epigenetics, Applied Energy Medicine and the Intent Healing(TM) method further, it is recommended to read the two editorials given under the references in this report.

METHODS

Energy based assessments and reports were given to each parent individually after the observation of their energies over two days and two nights. Similar energy assessment was done for the boy as well and the report of his energy pattern was shared with both parents. The specific and individual energy disturbances seen in each of them and the reasons for the same was explained in detail in the report. Remote Healing sessions with Intent Healing(TM) was done. The healing sessions were of two types - Timed remote healing sessions and healing sessions over Skype. The sessions over Skype was done with the parents and the sessions for the boy was done over Skype as well as Timed remote healing sessions when the boy was lying in bed at night. The total number of healing sessions were 20 of which 3 sessions were done with the father, 1 session with the mother (both biological parents) and 16 sessions for the boy (5 sessions over Skype and 11 sessions as Timed Remote Healing sessions where the boy was lying in bed in Canada while I channeled Intent Healing energies from India). The sessions were spread over over a period of one month. The energy disturbance in each parent and the boy was corrected and their energies re-aligned in the healing sessions over Skype and in the timed remote healing sessions. Regular feedback about the

shifts seen in the energy fields of each parent and in the boy was given to the parents after each healing session done with them and their child. Regular feedback and update about the progress in the boy with the healing sessions was reported by the father and the boy through email correspondence and as “before healing” and “after healing” pictures and videos.

RESULTS

Improvements in the symptoms were seen right from the first healing session with the father of the child. The results seen with the healing sessions over a span of one month were as follows- dramatic improvement in energy levels and for the first time in his life the boy started waking up and going for early morning exercise of running, completely of his own interest and volition. Remarkable improved focus and performance in studies with motivation to study on his own was reported and the boy started initiating active discussions relating to studies, with his peers at school. Self-talking completely stopped. He started taking the bus to school on his own and started traveling independently. Additionally, he started playing basket-ball at school and started dressing on his own. He stopped taking melatonin and started sleeping effortlessly and well at night. B.P in lower limbs became completely normal with normal co-ordination between left and right sides of the body. Strabismus vastly improved. He developed satisfactory emotional stability, started helping his parents with daily chores of his own interest and successfully obtained a part-time job of his own interest and volition, in Canada.

CONCLUSIONS

Applied Intentional Epigenetics using Intent Healing(TM) method can heal the limiting symptoms in Autism including and especially in adolescents/adults on the spectrum, regardless of the number of years they may have been suffering with the limiting symptoms. Intent Healing Remote healing method results in improvements seen right from the first healing session, ultimately leading to permanent healing of the limiting symptoms in Autism. This liberates the person from feeling limited and trapped by the symptoms and helps them to experience freedom for the first time in their lives. Not only that, Applied Intentional Epigenetics empowers the individual with autism by helping them become truly independent and enables them to thrive with their unique gifts and talents. It would be worthwhile to bring this quote by Tesla to our consciousness. “The day science begins to study non-physical phenomena, it will make more progress in one decade than in all the previous centuries of its existence.” – Nikola Tesla.
